PROFILE SUMMARY

I'm a BCA undergraduate at GD Rungta College and I am passionate about **Software Development**, **UI Design**, and **Graphic Design**. I'm constantly engaging myself in the latest industry trends and technologies to keep enhancing my skills. It's not just a hobby for me; it's a burning desire to create, innovate, and push boundaries in the world of technology and design!

TECHNICAL SKILLS

Languages:	HTML5, CSS3, JavaScript, C++, Python, SQL, Django.
Industry Knowledge:	API, Frontend Development. UI/UX Designing, Unit Testing, Visual Designing, Programming, Prototyping, Responsive Web Design, Wireframing, SEO Research
Tools & Technologies:	Git, GitHub, Figma, Adobe Creative Suite, Adobe Photoshop, Microsoft Office, InVision, VS Code, WordPress, Lambda Test, SEMRush

PROJECTS

Web	Job Portal Website using Django Job Portal Website is my final year major project. This is a web-based solution where I developed 3 interfaces each for Applicants, Employer and Admin for monitoring. I have used the waterfall model for the building approach of this project. Tech Stack used for building this project is Django and SQLite.	github.com/shuvbhamm/Job-Portal-Website-using-Django
Web	Krishi Vriksha - Live Marketplace for farmers Krishi Vriksha is a web application that comes with multi-lingual support, where farmers can connect with live markets globally for their better knowledge of the market. Farmers can also buy farming-related products from this platform. This is a one-stop solution for farmers. This project is developed in the OpinHacks Hackathon by my team. This website can be trusted because the data we are gathering is from the National Database Public API	github.com/shuvbhamm/OpinHacks—Krishi-Vriksha
Python	Video Background Remover This project is built on Python and OpenCV is used. This application can remove the green-screened background of videos and can also change the background of video.	github.com/shuvbhamm/invisibility_cloak_project_python
Mobile UI	MEDecode : Decode your Medicine This project was developed for the HackThisFall 4.0 Hackathon which was hosted by Karnavati University. MEdDecode is a progressive web app that is used to get detailed information on medicine just by scanning the leaflet of medicine.	behance.net/shuvbhamm
